Professional Experience

Digital & Technology Services, Alvarez & Marsal, London, UK

July 2025 – Sept. 2025

Global consulting firm delivering digital transformation, strategy, and data-driven performance improvement

- Evaluated and presented digital transformation initiatives for a £2B+ annual revenue client
- Produced strategic insights through k-means clustering, segmentation analysis, and visualisation
- Conducted exploratory data analysis, data cleaning, feature engineering, and vector embeddings

Product Engineer, Humanising Autonomy, London, UK

May 2024 – Aug. 2024

Technology startup implementing ethical AI through computer vision in the automotive sector

- Created market reports analysing of competitor offerings, market conditions and global trends
- Identified and prioritised key clients to increase revenue generation within the B2B sales channel

Summer Analyst, Beacon Capital, London, UK

July 2023 – Sept. 2023

Venture Capital firm specialising in early-stage startups in the European enterprise SaaS market

- Researched and identified startups aligned with investment thesis, expanding deal pipeline
- Initiated outreach to target companies and fostered strong relationships with founders

Data Scientist, TBC Bank, Tbilisi, Georgia

Aug. 2022 – Sept. 2022

LSE listed financial services group. Data Science division responsible for Business, Risk, and Client modelling

- Prepared datasets and evaluated SVM, Random Forest, and XGBoost models for predictive accuracy
- Built and deployed an XGBoost pipeline to predict employee churn, integrating validation and testing

Projects (source code: <https://github.com/Tokoavaliani>)

Sudoku Solver

- Developed an application using object-oriented programming with a “brute-force” recursive solver
- Built a user-friendly GUI using tkinter where users may upload sudokus automatically using OpenCV
- Integrated API calls to LLMs using OpenRouter to provide logical hints at any stage of the puzzle

Blackjack

- Created an application for learning basic strategy and counting with realistic game mechanics in PyQt
- Developed a statistical tracking system to analyse player performance against strategy benchmarks

Education

Gonville and Caius College, University of Cambridge

Oct. 2021 – present

MEng Electrical and Information Sciences (college scholar expected first class honours)

- Linear algebra, stochastic processes, optimisation, Markov chains, Monte Carlo, PCA, and SVD
- Integrated circuit design, radio-frequency circuits, semiconductors, and photonics
- Signal processing, data transmission, information theory and coding, probability theory, and inference
- Macro- and microeconomics, market structures, game theory, and pricing strategies

Autonomous Robot – Built as part of an interdisciplinary team using system design, rapid prototyping, and embedded systems. Programmed control software in C++, integrated continuous testing, and refined design

Data Link – Designed, assembled, and characterised a high-speed fibre optic communication system. Applied analogue/digital circuit design, built an automatic gain control detector, and ensured robust data transmission.

Extra-Curricular

Men's Captain, Gonville and Caius College Boat Club, Cambridge

June 2023 – July 2024

- Built training programs, recruited new coaches and athletes, and led a diverse squad of 40+ students
- Managed relationships by developing a culture of transparency and communication

President, Gonville and Caius College Engineering Society

May 2025 – present

- Represented the interests of 50+ members in meetings with college staff
- Organised technical talks, exhibitions, and social events to enhance engagement and experience
